KEREN FINANCE

C - FR0014013NN3 - Last: 103.22 - AuM: 65.91 mEUR

Investment objectives :

In order to achieve the management objective over the recommended investment period (years until this product expiry) , The UCITS aims to achieve an annualised net performance above 4% over the period between the Fund's inception on 12/04/2025 and the last NAV date of 2032 (Friday, 31 December 2032). This management objective takes into account the estimated default risk, the potential hedging costs (including currency risk hedging), and management fees. It is based on market assumptions determined by the Management Company and is in no way guaranteed. Investors should be aware that: (1) the performance indicated in the Fund's management objective does not incorporate all possible default scenarios and relies on estimates based on market assumptions set at a given point in time; (2) there is a risk that the actual financial situation of the issuers may be worse than expected; (3) such adverse conditions (e.g., a higher number of defaults, lower recovery rates) would result in reducing the Fund's performance. The management objective may therefore not be achieved. Before 31 December 2032, the Management Company will decide, depending on prevailing market conditions, either to renew a similar investment strategy with a new target maturity date, or to merge the Fund with another UCITS, or to liquidate the Fund, subject to approval by the AMF. The Fund seeks to optimise the portfolio's average yield-to-maturity as of 31 December 2032 and to select issuers offering the lowest probability of default relative to the return provided and the fundamental analysis of the various inherent risk factors.

ESG Analyst

Alexandre Brulé

Synthetic Risk Indicator (SRI):

1	**2**	3	4	5	6	7

The SRI (Synthetic Risk Indicator) ranges from 1 (lowest risk) to 7 (highest risk). A lower SRI does not mean a risk-free investment. This level may change over time. Volatility calculation: weekly frequency.

Monthly review :

In September, the STOXX 600 fell 2.48%, weighed down by escalating tensions in the Middle East and maritime blockades that drove Brent crude to $98. This energy shock reignited inflation and prompted central banks (the ECB, the Fed, and the BoJ) to tighten monetary policy, pushing the U.S. 10-year yield to 5.23%. Despite resilient growth and solid PMIs (53.1 in the eurozone, 58.4 in the U.S.), the prospect of high interest rates weighed on the indices. Only the Energy sector (+2.8%), boosted by oil, and the Technology sector (+2.0%), driven by AI, ended the month in positive territory.

As the fund is less than one year old, the full performance report cannot be shown.

The Fund does not guarantee returns or performance and presents a risk of capital loss. We would advise you to consider the following main risks: risk of capital loss, risk associated with discretionary management, interest rate risk, credit risk, risk associated with investments in speculative securities (high yield), risk associated with convertible bonds, equity market risk, currency risk, risk associated with the use of derivatives, counterparty risk, risk associated with collateral management.

Non-financial performances:

This UCITS promotes environmental or social and governance (ESG) criteria within the meaning of Article SFDR of Regulation (EU) 2019/2088 on sustainability disclosures in the financial services industry (the 'SFDR Regulation'). It does not aim to be a sustainable investment. It may invest partially in assets with a sustainable objective, for example as defined by the EU classification.

Charbon	0.03%
Pétrole	2.72%
Gas	6.90%
Total	9.66%

Exposure to sectors linked to fossil fuels. Source: Keren Finance.

Quantitative analysis:

Keren Finance's internal quantitative model is called KEYS (Keren ESG Yield System). It collects and stores extra-financial data from companies' ESG/ SRI or sustainability reports. It uses the Sequantis Transition Monitor tool, which retrieves data from Carbon4 Finance* and Sustainalytics. This data is then compared against 13 or 25 criteria/Keys Performance Indicators (KPIs), by sector, using a best-in-class approach.

Qualitative analysis:

In addition to the quantitative analysis, we also carry out a qualitative analysis based on the same criteria in order to check the consistency of our KEYS model. As KEYS only collects data from extra-financial reports, some key information is sometimes not included because it is directly available on the issuer's website or in press reviews.

Glossary:

Sharpe Ratio	The Sharpe ratio is an indicator that measures the risk-adjusted return of an investment by comparing the excess return of an asset over a risk-free asset, relative to the volatility of that asset.
Sortino Ratio	The Sortino ratio is a risk-adjusted performance indicator that measures the excess return of an investment over a specific risk threshold, focusing solely on the negative volatility or 'bad volatility' of that investment.
Max drawdown	The maximum drawdown is the greatest percentage loss suffered by an investment or portfolio from its last peak to its lowest point, thus measuring the maximum risk taken over a given period.
Benchmark Beta	Beta measures how the fund's net asset values fluctuate relative to those of its benchmark index. Abeta below 1 means that the fund is less volatile than its index, while a beta above 1 indicates higher volatility. Anegative beta indicates an inverse reaction to fluctuations in the index.
Tracking Error	Tracking error is a measure of the divergence between a portfolio's returns and those of its benchmark index, indicating the relative performance gap between the portfolio and its index.
VaR	Value at Risk (VaR) refers to the estimate of the maximum probable loss that an investor could incur on the value of a portfolio of financial assets, taking into account a specific holding horizon (e.g. 20 days) and a given level of confidence (e.g. 99%). This estimate of potential loss is expressed as a percentage of the total value of the assets in the portfolio. It is calculated on the basis of a sample of historical data.
Volatility	Volatility is a measure of the amplitude of fluctuations in the prices or returns of a financial asset, indicating the level of risk associated with that asset.
Investment Grade	Investment Grade is a classification assigned to securities considered to be of high quality and presenting a low risk of default according to financial rating agencies.
High Yield	High yield, also known as 'non-investment grade' or 'junk bond', refers to debt securities issued by companies or entities whose creditworthiness is considered riskier by rating agencies. These bonds generally offer higher yields to compensate for the increased risk of default.
Net Asset Value	Price of a unit in a mutual fund
Sensitivity	The sensitivity of a bond refers to the reaction of its price to changes in interest rates. More precisely, it is the measure of the percentage change in the bond's price for a one percentage point change in interest rates. Ahigher sensitivity indicates a greater reaction to interest rate fluctuations. Sensitivity is closely related to duration, but is generally expressed as a percentage, providing a direct indication of the magnitude of the expected price change in response to a change in interest rates. The sensitivity shown in this document adjusts for the worst case scenario. The value shown is valid at the date of the document and may change during the life of the product.
Duration	The duration of a bond is a measure of the sensitivity of its price to changes in interest rates. It represents the weighted average duration of a bond's cash flows, including periodic coupons and repayment of principal at maturity. Duration is expressed in years and indicates the bond's relative sensitivity to changes in interest rates. The longer the duration, the more sensitive the bond is to changes in interest rates. The duration indicated in this document is adjusted to the worst-case scenario. The value shown is valid at the date of the document and may change during the life of the product.
Yield	The Yield To Maturity (YTM) of a bond represents the total annual rate of return that the investor would receive if he held the bond until its maturity date, taking into account the current price, the nominal value, the coupon payments and the remaining period to maturity. It is a measure of the overall return on investment over the life of the bond. The value displayed is valid on the date of the document and may change during the life of the product.
Average maturity	Average maturity weighted by the weight of the assets in the portfolio. Securities with no maturity date (or similar) are excluded from this calculation.
Convertibles	Aconvertible bond is a type of bond issued by a company that can be exchanged for a certain number of ordinary shares in the same company, at a predetermined price, during a defined period.
KCR	Internal credit rating system: Keren Credit Rating.
Rating	Arating from a rating agency is an evaluation of the financial solvency of a company, government or financial instrument, expressed as a letter, figure or qualitative term, which indicates the level of risk associated with that issuer or instrument.
ESG	Environmental, social and governance criteria.
PAI	(Principal Adverse Indicators) Describe significant or potentially significant negative impacts on sustainability aspects that result from, exacerbate or are directly linked to a legal entity's investment decisions or recommendations. Greenhouse gas (GHG) emissions and carbon footprint illustrate this phenomenon.

KEREN FINANCE

Keren Donation Fund and philanthropy:

KEREN FONDS MECENAT
Au sein du Fonds de Dotation Transatlantique

In the interests of clarity, transparency and sharing, Keren Finance has chosen to link the annual payments made to the Keren Patronage fund to its turnover and not to its net income. Each time a client subscribes to a unit in a Keren Finance mutual fund, a percentage of the sales generated by the purchase is paid into the fund. The Mécénat Keren fund was set up within the Fonds de Dotation Transatlantique in 2016 to help research, the fight against cancer and, in particular, sick children.

Disclaimer:

This document is provided for information purposes only and has no contractual value. Under no circumstances does it constitute advice or a personalised investment recommendation on one or more financial instruments. Nor does it constitute legal or tax advice from KEREN FINANCE. This document was drawn up on a specific date and the information it contains may become obsolete as a result of market fluctuations.

The scenario presented is an estimate of future performance based on current market conditions, which may vary and thus affect the value of an investment or return. The return obtained may vary according to market performance and the length of time the investor holds the investment. Past performance is not constant over time and is not a reliable indicator of future performance.

Particular financial instruments and asset classes may be reserved for a certain category of investors or present various risks, implying a partial or total loss of the value of the investment, and may therefore only be suitable for well-informed investors. For a more complete definition of risks, it is imperative to consult the product prospectuses or other regulatory documents (if applicable) before investing.

In addition, any investment will require a detailed KYC (investor profile, objectives and investment horizon, etc.) to determine the investor's profile beforehand in order to verify the suitability of the instruments or services envisaged. Investors are also asked to consult their personal advisers to assess the financial, accounting, tax and legal treatment of the investments envisaged.

As a result, KEREN FINANCE may not be held liable for any consequences, in particular financial consequences, resulting from transactions on financial instruments received on the basis of this document.

This document is confidential, intended exclusively for the person to whom it is given, and may not be communicated to any third party, nor reproduced without the prior agreement of KEREN FINANCE.
