KEREN CORPORATE

SFDR 8

KEREN FINANCE

I - FR0010700401 - Last: 247.19 - AuM: 399.85 mEUR

Sub-fund of the Keren SICAV

Investment objectives :

In order to achieve the management objective over the recommended investment period >3 years , Keren Corporate adopts an active management style, investing in euro-denominated debt securities and money market instruments, private debt and convertible debt (max. 10%), with no a priori allocation constraints by geographic zone, duration, rating, business sector or security type.

Portfolio Manager

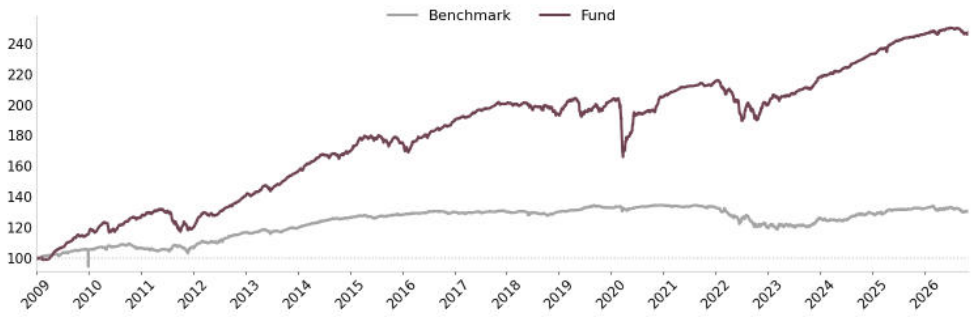

Benoît Soler

Analyst

Benoît de Broissia

Change in net asset value:

** Benchmark : Bloomberg Barclays EuroAgg Treasury 3-5 ans TR.*

Monthly review :

The 10-year OAT yield rose above 5% for the first time since 2002, while the spread versus the German Bund widened beyond 170bps, its highest level since 2011, with France now borrowing at higher rates than Italy; Moody's maintained its Aa3 rating on the 23rd. The widening was driven as much by a flight to quality towards Bunds, whose yield fell back below 3.40%, as by the rise in OAT yields. The ECB kept interest rates unchanged on 29 October, with Lagarde announcing her departure while leaving the door open to a potential move in December. European IG spreads (105bps at the end of October) and HY spreads (380bps) widened by 15bps and 60bps respectively. KC gained 0.21% over the month, while posting a slight loss year-to-date. As expected, the HC sleeve came under pressure, with names such as VMED, ATOS and Clariane making fairly significant negative contributions. Conversely, the Overlay sleeve performed its role as a stabiliser particularly well. We are increasing the portfolio's risk exposure, resulting in a higher yield to maturity as well as longer duration. However, the fund maintains a mixed IG/HY profile at this stage.

Performance analysis *(Net of management fees)*

Cumulative returns:

	Fund	Benchmark	Spread
1 month	0.27%	0.55%	-0.28%
3 months	-0.83%	-1.05%	0.21%

KEREN FINANCE

Non-financial performances:

This UCITS promotes environmental or social and governance (ESG) criteria within the meaning of Article SFDR of Regulation (EU) 2019/2088 on sustainability disclosures in the financial services industry (the 'SFDR Regulation'). It does not aim to be a sustainable investment. It may invest partially in assets with a sustainable objective, for example as defined by the EU classification.

ESG Coverage:

Excluding cash holdings.

Sector	Exposure
Charbon	0.11%
Pétrole	0.47%
Gas	3.03%
Total	3.61%

Exposure to sectors linked to fossil fuels. Source: Keren Finance.

Quantitative analysis:

Keren Finance's internal quantitative model is called KEYS (Keren ESG Yield System). It collects and stores extra-financial data from companies' ESG/ SRI or sustainability reports. It uses the Sequantis Transition Monitor tool, which retrieves data from Carbon4 Finance* and Sustainalytics. This data is then compared against 13 or 25 criteria/Keys Performance Indicators (KPIs), by sector, using a best-in-class approach.

Qualitative analysis:

In addition to the quantitative analysis, we also carry out a qualitative analysis based on the same criteria in order to check the consistency of our KEYS model. As KEYS only collects data from extra-financial reports, some key information is sometimes not included because it is directly available on the issuer's website or in press reviews.

KEREN FINANCE

Glossary:

Sharpe Ratio	The Sharpe ratio is an indicator that measures the risk-adjusted return of an investment by comparing the excess return of an asset over a risk-free asset, relative to the volatility of that asset.
Sortino Ratio	The Sortino ratio is a risk-adjusted performance indicator that measures the excess return of an investment over a specific risk threshold, focusing solely on the negative volatility or 'bad volatility' of that investment.
Max drawdown	The maximum drawdown is the greatest percentage loss suffered by an investment or portfolio from its last peak to its lowest point, thus measuring the maximum risk taken over a given period.
Benchmark Beta	Beta measures how the fund's net asset values fluctuate relative to those of its benchmark index. Abeta below 1 means that the fund is less volatile than its index, while a beta above 1 indicates higher volatility. Anegative beta indicates an inverse reaction to fluctuations in the index.
Tracking Error	Tracking error is a measure of the divergence between a portfolio's returns and those of its benchmark index, indicating the relative performance gap between the portfolio and its index.
VaR	Value at Risk (VaR) refers to the estimate of the maximum probable loss that an investor could incur on the value of a portfolio of financial assets, taking into account a specific holding horizon (e.g. 20 days) and a given level of confidence (e.g. 99%). This estimate of potential loss is expressed as a percentage of the total value of the assets in the portfolio. It is calculated on the basis of a sample of historical data.
Volatility	Volatility is a measure of the amplitude of fluctuations in the prices or returns of a financial asset, indicating the level of risk associated with that asset.
Investment Grade	Investment Grade is a classification assigned to securities considered to be of high quality and presenting a low risk of default according to financial rating agencies.
High Yield	High yield, also known as 'non-investment grade' or 'junk bond', refers to debt securities issued by companies or entities whose creditworthiness is considered riskier by rating agencies. These bonds generally offer higher yields to compensate for the increased risk of default.
Net Asset Value	Price of a unit in a mutual fund
Sensitivity	The sensitivity of a bond refers to the reaction of its price to changes in interest rates. More precisely, it is the measure of the percentage change in the bond's price for a one percentage point change in interest rates. Ahigher sensitivity indicates a greater reaction to interest rate fluctuations. Sensitivity is closely related to duration, but is generally expressed as a percentage, providing a direct indication of the magnitude of the expected price change in response to a change in interest rates. The sensitivity shown in this document adjusts for the worst case scenario. The value shown is valid at the date of the document and may change during the life of the product.
Duration	The duration of a bond is a measure of the sensitivity of its price to changes in interest rates. It represents the weighted average duration of a bond's cash flows, including periodic coupons and repayment of principal at maturity. Duration is expressed in years and indicates the bond's relative sensitivity to changes in interest rates. The longer the duration, the more sensitive the bond is to changes in interest rates. The duration indicated in this document is adjusted to the worst-case scenario. The value shown is valid at the date of the document and may change during the life of the product.
Yield	The Yield To Maturity (YTM) of a bond represents the total annual rate of return that the investor would receive if he held the bond until its maturity date, taking into account the current price, the nominal value, the coupon payments and the remaining period to maturity. It is a measure of the overall return on investment over the life of the bond. The value displayed is valid on the date of the document and may change during the life of the product.
Average maturity	Average maturity weighted by the weight of the assets in the portfolio. Securities with no maturity date (or similar) are excluded from this calculation.
Convertibles	Aconvertible bond is a type of bond issued by a company that can be exchanged for a certain number of ordinary shares in the same company, at a predetermined price, during a defined period.
KCR	Internal credit rating system: Keren Credit Rating.
Rating	Arating from a rating agency is an evaluation of the financial solvency of a company, government or financial instrument, expressed as a letter, figure or qualitative term, which indicates the level of risk associated with that issuer or instrument.
ESG	Environmental, social and governance criteria.
PAI	(Principal Adverse Indicators) Describe significant or potentially significant negative impacts on sustainability aspects that result from, exacerbate or are directly linked to a legal entity's investment decisions or recommendations. Greenhouse gas (GHG) emissions and carbon footprint illustrate this phenomenon.

KEREN FINANCE

Keren Donation Fund and philanthropy:

KEREN FONDS MECENAT
Au sein du Fonds de Dotation Transatlantique

In the interests of clarity, transparency and sharing, Keren Finance has chosen to link the annual payments made to the Keren Patronage fund to its turnover and not to its net income. Each time a client subscribes to a unit in a Keren Finance mutual fund, a percentage of the sales generated by the purchase is paid into the fund. The Mécénat Keren fund was set up within the Fonds de Dotation Transatlantique in 2016 to help research, the fight against cancer and, in particular, sick children.

Disclaimer:

This document is provided for information purposes only and has no contractual value. Under no circumstances does it constitute advice or a personalised investment recommendation on one or more financial instruments. Nor does it constitute legal or tax advice from KEREN FINANCE. This document was drawn up on a specific date and the information it contains may become obsolete as a result of market fluctuations.

The scenario presented is an estimate of future performance based on current market conditions, which may vary and thus affect the value of an investment or return. The return obtained may vary according to market performance and the length of time the investor holds the investment. Past performance is not constant over time and is not a reliable indicator of future performance.

Particular financial instruments and asset classes may be reserved for a certain category of investors or present various risks, implying a partial or total loss of the value of the investment, and may therefore only be suitable for well-informed investors. For a more complete definition of risks, it is imperative to consult the product prospectuses or other regulatory documents (if applicable) before investing.

In addition, any investment will require a detailed KYC (investor profile, objectives and investment horizon, etc.) to determine the investor's profile beforehand in order to verify the suitability of the instruments or services envisaged. Investors are also asked to consult their personal advisers to assess the financial, accounting, tax and legal treatment of the investments envisaged.

As a result, KEREN FINANCE may not be held liable for any consequences, in particular financial consequences, resulting from transactions on financial instruments received on the basis of this document.

This document is confidential, intended exclusively for the person to whom it is given, and may not be communicated to any third party, nor reproduced without the prior agreement of KEREN FINANCE.
